Project Title

EMERGENCY_HELP_HUB

Short Description

Emergency Help Hub is a centralized web-based emergency service management platform designed to connect citizens, emergency service providers, organizations, and administrators. The system manages emergency requests, service provider coordination, organizational support, fund management, and notification services through a role-based MVC web application.

Introduction

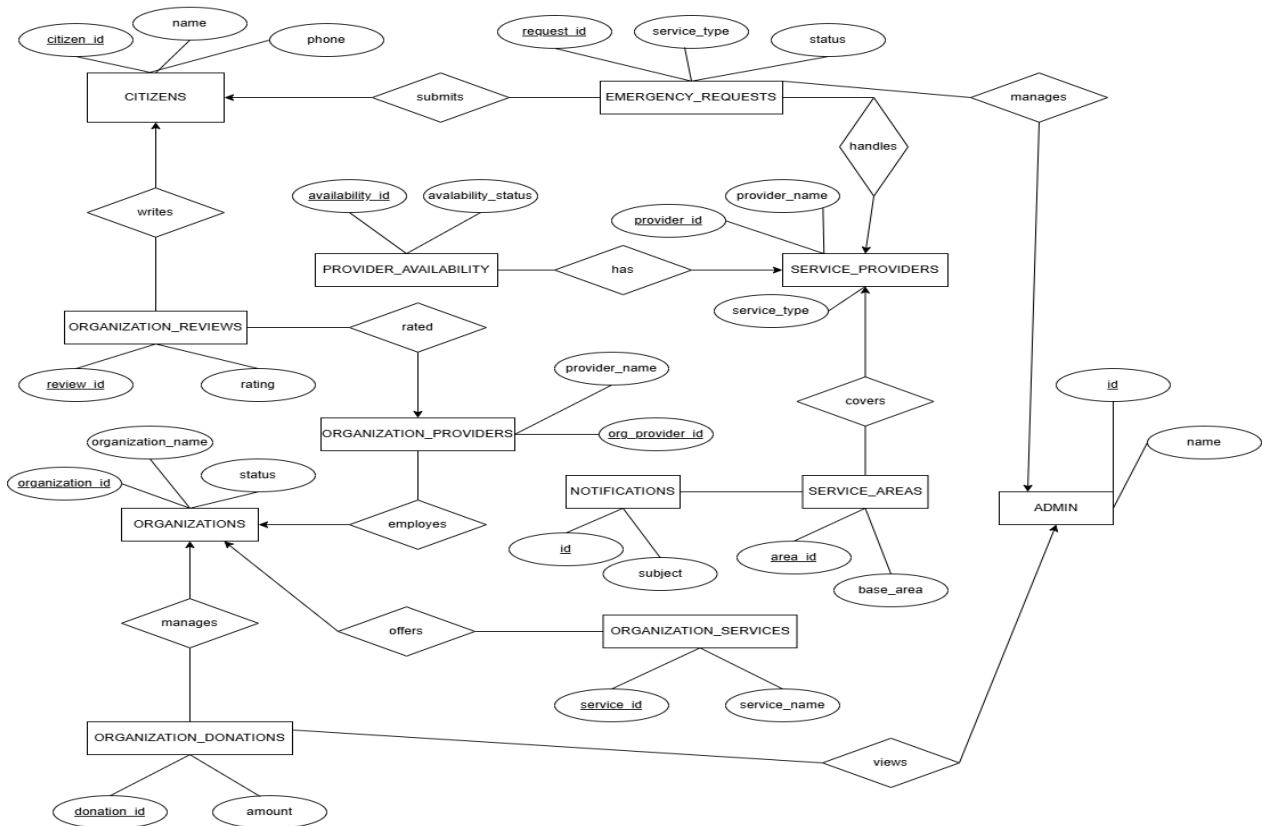

Emergency situations often involve delays in communication, lack of coordination, and difficulty in accessing the right emergency services at the right time. Traditional emergency response systems may not provide a centralized platform for citizens, service providers, organizations, and administrators to communicate and coordinate effectively. Emergency Help Hub is developed to address these challenges by providing a centralized web-based platform where citizens can request emergency assistance, service providers can respond to requests, organizations can provide support and manage resources, and administrators can monitor and manage the overall emergency response workflow through a role-based MVC system.

Background Study

Existing emergency service systems are often fragmented across different organizations and service providers, making it difficult to track emergency requests, coordinate responses, and manage available resources efficiently. The lack of a centralized platform can lead to communication gaps and delays in emergency response. A web-based emergency management system can improve communication, reduce response time, and support better coordination and resource management.

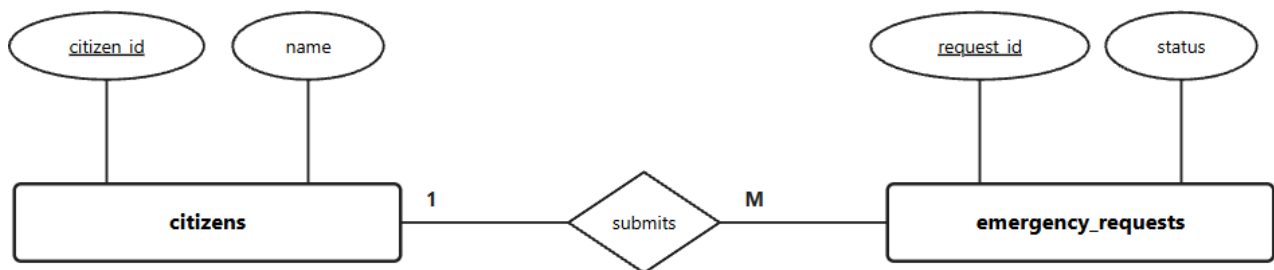

This project focuses on developing a secure, centralized, role-based web application using PHP, MySQL, MVC architecture, authentication, session management, and database management techniques. The system is designed to provide a coordinated platform for citizens, emergency service providers, organizations, and administrators to manage emergency-related activities efficiently.

Normalization:

1. **citizens** $\rightarrow$ **emergency_requests**

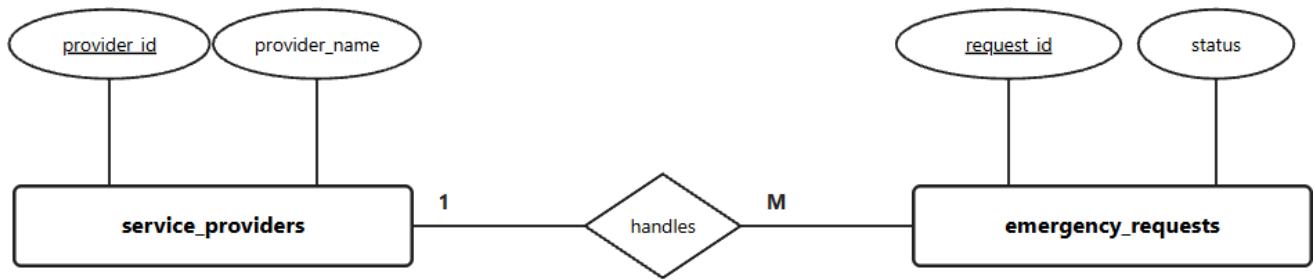

Relation: One to many

UNF: citizen_id, name, phone, request_id, service_type, status

1NF: No multivalued attributes

citizen_id, name, phone, request_id, citizen_id, service_type, status

2. service_providers → emergency_requests

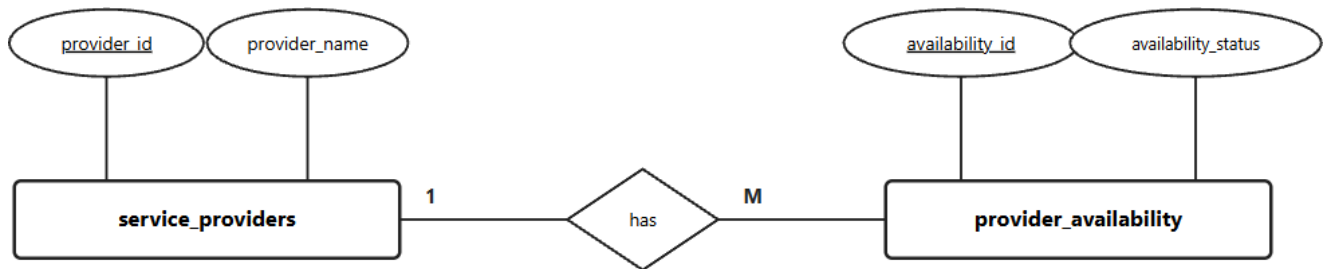

Relation: One to many

UNF: provider_id, provider_name, service_type, request_id, service_type, status

1NF: No multivalued attributes

provider_id, provider_name, service_type, request_id, provider_id, service_type, status

3. service_providers → provider_availability

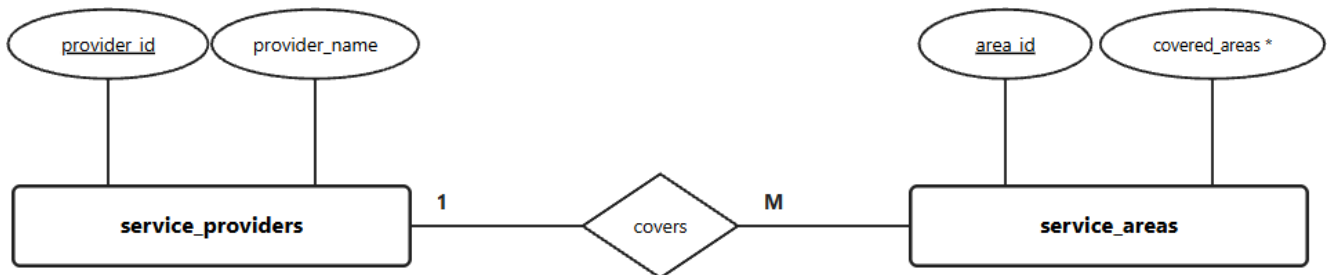

Relation: One to many

UNF: provider_id, provider_name, service_type, availability_id, availability_status

1NF: No multivalued attributes

provider_id, provider_name, service_type, availability_id, provider_id, availability_status

4. service_providers → service_areas

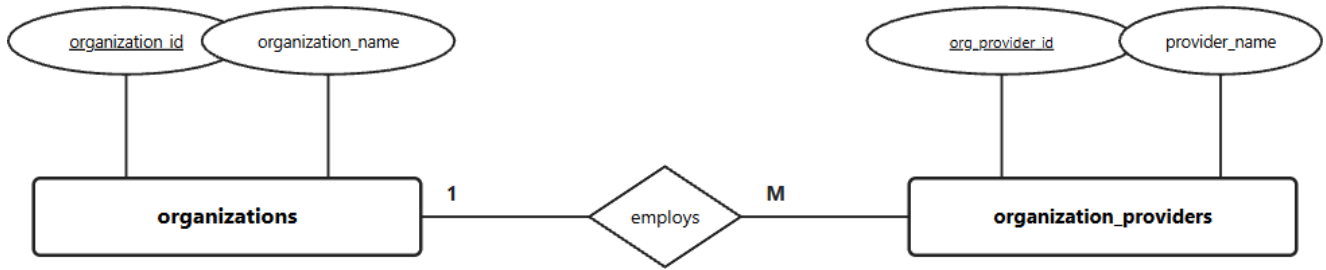

Relation: One to many

UNF: provider_id, provider_name, service_type, area_id, base_area, covered_areas

1NF: Multivalued Attributes: covered_areas

provider_id, provider_name, service_type, area_id, provider_id, base_area, area_id, area_name

5. organizations → organization_providers

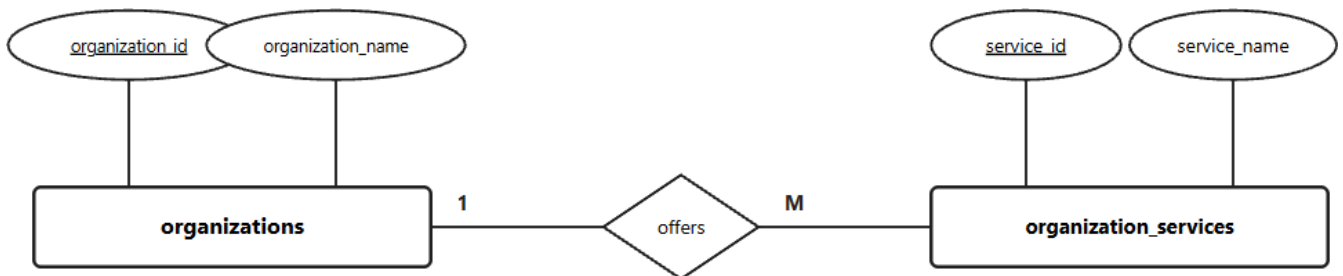

Relation: One to many

UNF: organization_id, organization_name, status, organization_provider_id, provider_name

1NF: No multivalued attributes

organization_id, organization_name, status, organization_provider_id, organization_id, provider_name

6. organizations → organization_services

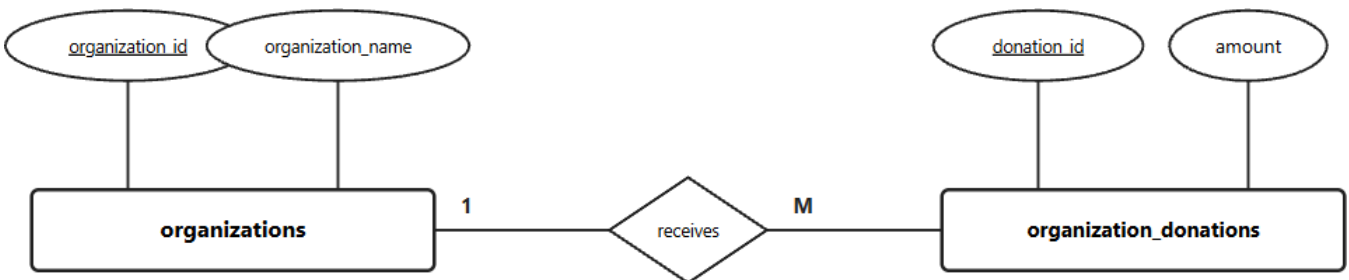

Relation: One to many

UNF: organization_id, organization_name, status, service_id, service_name

1NF: No multivalued attributes

organization_id, organization_name, status, service_id, organization_id, service_name

7. organizations → organization_donations

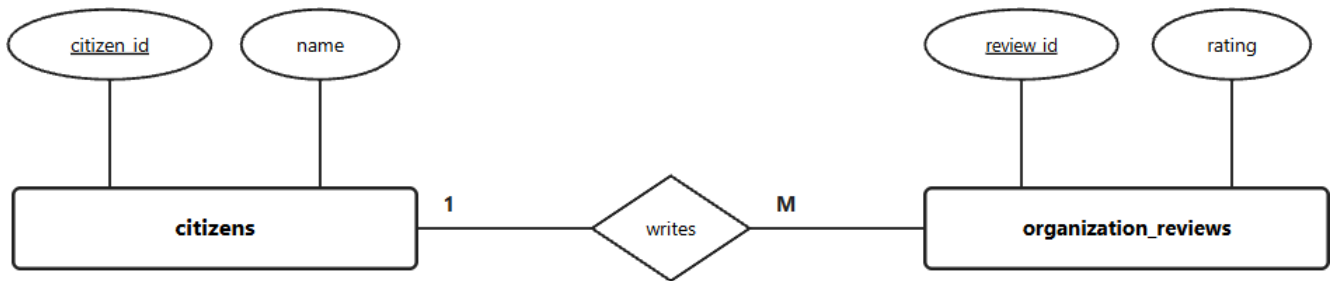

Relation: One to many

UNF: organization_id, organization_name, status, donation_id, amount

1NF: No multivalued attributes

organization_id, organization_name, status, donation_id, organization_id, amount

8. citizens → organization_reviews

Relation: One to many

UNF: citizen_id, name, phone, review_id, rating

1NF: No multivalued attributes

citizen_id, name, phone, review_id, citizen_id, rating

9. organization_providers → organization_reviews

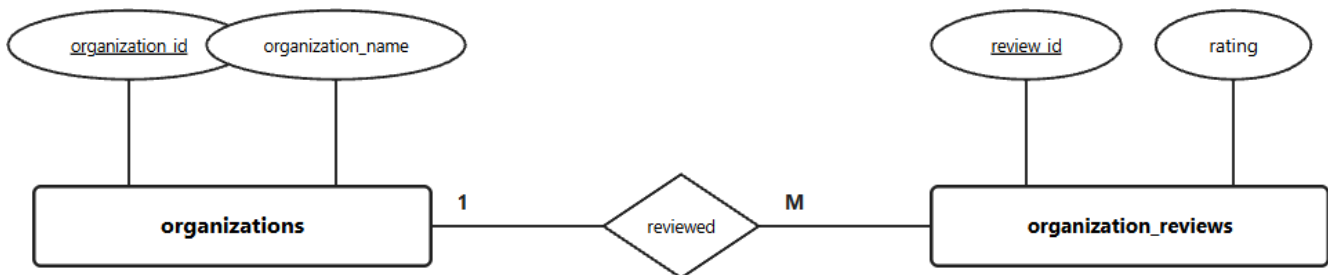

Relation: One to many

UNF: organization_provider_id, provider_name, review_id, rating

1NF: No multivalued attributes

organization_provider_id, provider_name, review_id, organization_provider_id, rating

10. organizations → organization_reviews

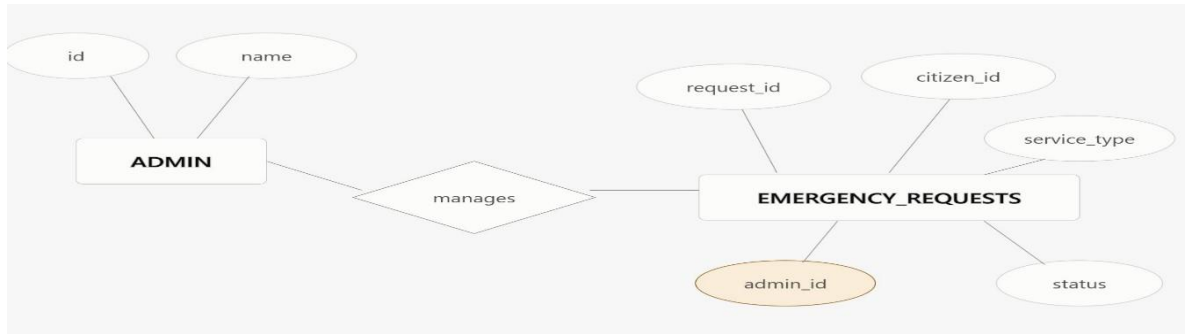

Relation: One to many

UNF: organization_id, organization_name, status, review_id, rating

1NF: No multivalued attributes

organization_id, organization_name, status, review_id, organization_id, rating

11. admin → emergency_requests

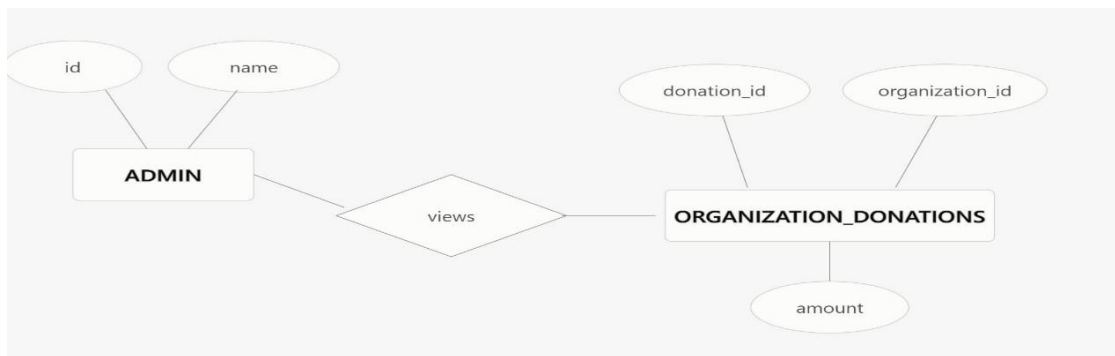

Relation: One to many

UNF: admin_id, name, request_id, citizen_id, service_type, status

1NF: No multivalued attributes

admin_id, name, request_id, id, citizen_id, service_type, status

12. admin → organization_donations

Relation: One to many

UNF: admin_id, name, donation_id, organization_id, amount

1NF: No multivalued attributes

admin_id, name, donation_id, organization_id, amount

Total Tables:

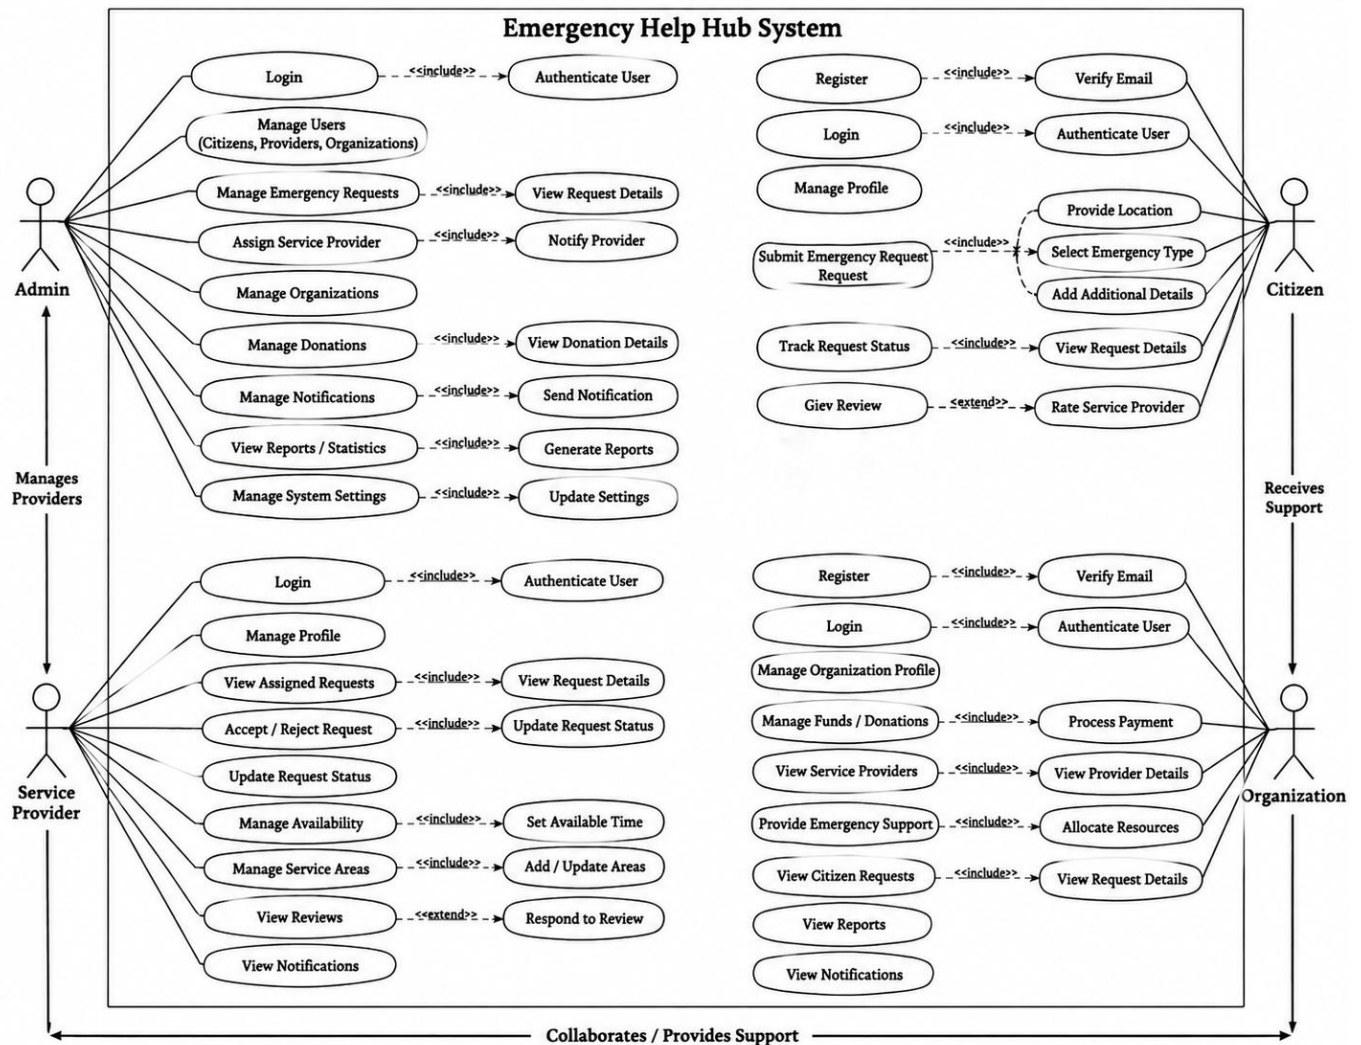

1. citizen_id, name, phone
2. request_id, citizen_id, service_type, status
3. provider_id, provider_name, service_type
4. request_id, provider_id, service_type, status
5. provider_id, provider_name, service_type
6. availability_id, provider_id, availability_status
7. provider_id, provider_name, service_type
8. area_id, provider_id, base_area
9. area_id, area_name
10. organization_id, organization_name, status
11. organization_provider_id, organization_id, provider_name
12. organization_id, organization_name, status
13. service_id, organization_id, service_name
14. organization_id, organization_name, status
15. donation_id, organization_id, amount
16. citizen_id, name, phone
17. review_id, citizen_id, rating
18. organization_provider_id, provider_name
19. review_id, organization_provider_id, rating

20. organization_id, organization_name, status
21. review_id, organization_id, rating
22. admin_id, name
23. admin_id, subject
24. admin_id, name
25. request_id, admin_id, citizen_id, service_type, status
26. admin_id, name
27. donation_id, organization_id, amount

Finalizations:

1. citizen_id, name, phone
2. provider_id, provider_name, service_type
3. request_id, citizen_id, provider_id, admin_id, service_type, status
4. availability_id, provider_id, availability_status
5. area_id, provider_id, base_area
6. area_id, area_name
7. organization_id, organization_name, status
8. organization_provider_id, organization_id, provider_name
9. service_id, organization_id, service_name
10. donation_id, organization_id, amount
11. review_id, citizen_id, organization_provider_id, organization_id, rating
12. admin_id, name
13. admin_id, subject

Types of Users: 1. Admin (23-54308-3) 2. Organization (23-54172-3) 3. Emergency Service Provider (23-54453-3) 4. Citizen (23-54171-3)

Common Features (Available to All Users)

- **Authentication**
 1. Login to the system
 2. Logout from the system
 3. User registration
- **Account Management**
 1. Change or reset password
 2. Manage profile information (view, edit, delete)
- **Dashboard**
 1. Access a personalized dashboard after login

Specific Features by User Type

- **Admin (23-54308-3)**
 1. Monitor overall system activities, including citizens, emergency service providers, organizations, and emergency requests.
 2. Create and manage system notifications and announcements.
 3. Review organization fund requests and approve or reject them.
- **Organization (23-54172-3)**
 1. Ratings and Review emergency service provider records
 2. Coordinate immediate emergency support.
 3. Manage fund support activities.
- **Emergency Service Provider (23-54453-3)**
 1. Manage vehicle information and availability.
 2. Manage service time and route information.
 3. Manage service range and location coverage.
- **Citizen (23-54171-3)**
 1. Manage citizen profile information.
 2. Submit emergency service requests.
 3. Provide emergency details including wheelchair requirement and injury level.
